

Computer Network Programming  
FINAL Exam [asType: HomeWork]  
Computer Engineering Department  
Manisa Celal Bayar University

Final Exam [AsType: HomeWork]

<b>Name</b>	Cins Apartment Management System
<b>Domain</b>	TCP-UDP/IP Socket Programming
<b>Canonical Name</b>	CinsApMaSys
<b>Team Size</b>	Max 2 students.
<b>Start Date</b>	29 Dec 2022, 10:00
<b>Due Date</b>	12 Jan 2023, 23:50
<b>Assesment</b>	Muhammet Erdem + Res.Asst.
<b>Grading</b>	Code [70] + Report described below [30]

**Objective:**

In this homework, we are going to learn TCP-UDP/IP Programming for Client/Server Models.

**Instruction Rules:**

**IR0:** Suppose, 8 families live in CinsApartment(No:101). All families have a computer/laptop that are connected to the same "IP Subnet" (There is no restriction in the communication base, such as firewall or another filter)

**IR1:** There is a single server (in the same Subnet) at the CinsAparment IT Room.

**IR2:** There is a single outer-gate of CinsApartment controlled by Card Reader (connected to Server).

**IR3:** You are supposed to develop CinsApMaSys that each computer and server. Each has a GUI based interface.

**IR4:** Server is responsible to collect weather/currency exchange info from internet servers weather.com and imkb.gov.tr respectively (Alternatives are going to be accepted).

**IR5:** The families side software GUI should be divided into continuously updated parts of;

- Weather Info division (updated from Server)
- Currency Exchange Info division (updated from Server)
- CardReader Info division (updated from Server) (i.e. Muhammed unlock the outer gate of CinsAparment with date/time record)
- Chat division (All families can join/write/read the chat on the screen in this division)

**IR4:** You are responsible for developing the necessary Server/Client systems (Card Reader Info can be manually added to a file (!) or physically card reader can be used. In reality CardReader part is not expected to be developed in this Hmw).

**IR5:** Asynchronous Sockets usage is expected.

**Materials:**

**M0:** Codes are written with C# using Asynchronous Sockets.

**M1:** TCP or UDP protocols can be used in the software development phase.

**M2:** Free to design the GUI (No need for professional looking screens).

**M3:** Your final report for FINAL HOMEWORK should be in the format of the following \*\*\*;

[\*\*\*]D. B. Sam, S. Surya, and R. V. Babu, "Switching convolutional neural network for crowd counting," Proc. - 30th IEEE Conf. Comput. Vis. Pattern Recognition, CVPR 2017, vol. 2017-January, pp. 4031–4039, 2017, doi: 10.1109/CVPR.2017.429.

**Warning:**

W1 : Late submission (violation of Due date) is not accepted.

W2 : Homework must be prepared by max two-students. Otherwise it is not accepted.

W3 : If the following copyright issues are recognized, submission is not accepted.

- Copy/paste from Internet
- Clone code from classmate
- Cheating from another team work.

W4 : Homework submission has to be done only through the Teams Platform (No need to present the homework).

W5 : Homeworks submitted via email are not accepted.

**Good Luck.....**
